CONTENTS

Chapter 1
Biomimetic coatings for bone tissue engineering of critical-sized defects

Chapter 2
Biomimetic coating of organic polymers with a protein-functionalized layer of calcium phosphate: The surface properties of the carrier influence neither the coating characteristics nor the incorporation mechanism or release kinetics of the protein

Chapter 3
The effect of a slow mode of BMP-2 delivery on the inflammatory response provoked by bone-defect-filling polymeric scaffolds
Biomaterials (2010) 31, 7485-7493. ................. 63

Chapter 4
Cell-mediated BMP-2 liberation promotes bone formation in a mechanically unstable implant environment

Chapter 5
BMP-2-incorporated Calcium Phosphate Coating Converts the Pro-inflammatory Activity within an Orbital-defect-filling polymer, Ethisorb™ into a pro-osteogenic one
In preparation. ............................................ 107

Chapter 6
Functionalization of Deproteinized Bovine Bone with Bone Morphogenetic Protein 2-incorporated Calcium-Phosphate Coating Confers Efficient Osteoinductivity and Improves its Biocompatibility
