Table of Contents

Preface IX

Chapter 1. Small Molecule Activation by Main Group Compounds 1
1.1. Introduction 2
1.2. Singlet Carbenes 4
1.3. Heavier Group XIV Carbene Analogues 9
  1.3.1. Silylenes 9
  1.3.2. Germynes and Stannyles 15
1.4. Group XV Carbene Analogues: Phosphinidenes and Phosphenium Ions 21
  1.4.1. Singlet Phosphinidenes 21
  1.4.2. Phosphenium Ions 23
1.5. Frustrated Lewis Pairs (FLPs) 28
  1.5.1. Discovery of Frustrated Lewis Pairs 28
  1.5.2. Proposed Mechanisms for the FLP-mediated H–H Bond Splitting and Association in Frustrated Complexes 30
  1.5.3. Reactivity of Frustrated Lewis Pairs 33
1.6. Concluding Remarks 46
1.7. References 48

Chapter 2. Preorganized Frustrated Lewis Pairs 63
2.1. Introduction 64
2.2. Results and Discussion 65
2.3. Conclusions 72
2.4. Computational Section 73
  2.4.1. Structural Analysis of 4a and 4b 73
  2.4.2. Rearrangement of 4a into 6 74
2.4.3. Reaction of 4a and 4b with H$_2$  
2.4.4. Reaction of 4b with CO$_2$  
2.4.5. Reaction of 4b with tBuNCO  
2.4.6. Comparison between Computed Structures and Crystal Structures  
2.5. Experimental Section  
2.6. References  

Chapter 3. Geminal Phosphorus/Aluminum-based Frustrated Lewis Pairs: C-H versus C=O Activation and CO$_2$ Fixation  
3.1. Introduction  
3.2. Results and Discussion  
3.3. Conclusions  
3.4. Computational Section  
3.4.1. Gas Phase Calculations and Solvent Effect  
3.4.2. NBO Calculations and cis-trans Isomerization  
3.4.3. Reaction of 4 with Phenylacetylene  
3.4.4. Reaction of 4 with CO$_2$  
3.4.5. Reaction with H$_2$  
3.5. Experimental Section  
3.6. References  

Chapter 4. Small Molecule Capture by Dimeric P/Al-Based Lewis Pairs  
4.1. Introduction  
4.2. Results and Discussion  
4.3. Conclusions  
4.4. Computational Section  
4.4.1. Structural Analysis of [1]$_2$  
4.4.2. Reaction of [1]$_2$ with CO$_2$  
4.4.3. Rearrangement of CO$_2$ Adducts  
4.4.4. Reaction of [1]$_2$ with tBuNCO  
4.4.5. Substrate Assisted Frustration  
4.5. Experimental Section
## Chapter 5. Phosphinidene Addition to Conjugated Allenes

### 5.1. Introduction

### 5.2. Results & Discussion

- **5.2.1.** Formation of (1-phenyl-3-isopropenyl-4-isopropyl-1H-phosphole)-pentacarbonyltungsten (**8**)
- **5.2.2.** Formation of (2,5-diisopropylidene-1-phenyl-2,5-dihydro-1H-phosphole)pentacarbonyltungsten (**9**)

### 5.3. Conclusions

### 5.4. Computational Section

- **5.4.1.** Thermal and Cu-Catalysed Ring-Closure of Tetramethyldiallene
- **5.4.2.** Phosphinidene Addition to 3,4-diisopropylidene-cyclobutene (**10**)

### 5.5. Experimental Section

### 5.6. References

---

**Samenvatting**

**Summary**
