Curriculum Vitae

Chris Vriend was born on March 17th 1987 in Amsterdam. After getting his high school diploma from the St. Ignatius Gymnasium in 2005 he went on to study Psychobiology and Biomedical Sciences at the University of Amsterdam. In 2009 he switched to the VU University to attain his master degree in Neurosciences. During the Master of Neurosciences he interned at the Netherlands Institute for Neurosciences in the sleeplab of prof. dr. Eus van Someren performing neuroimaging on patients with insomnia and sleep state misperception. His second internship he did at the department of Psychiatry of the VU University medical center working on the neural correlates of set-shifting capabilities in patients with obsessive-compulsive disorder with prof. dr. Dick Veltman and dr/ Odile van den Heuvel. After attaining his master degree in 2011, specializing with honor in clinical neurosciences he worked part-time as a data-manager at the Netherlands Twin Register and as a teaching assistant at the University of Amsterdam, teaching statistics to first-year biology students. In 2012 he went back to the department of Psychiatry to work with dr. Odile van den Heuvel and dr. Ysbrand van der Werf as a research assistant to assist Sonja Rutten on her project on the effect of bright light therapy on depression in Parkinson’s disease patients. Later that year this position was converted into a PhD-course under supervision of prof. dr. Henk Berense and prof. dr. Jan Smit on the neural correlates of neuropsychiatric symptoms in Parkinson’s disease. The results of this PhD-course are presented in this thesis. As of 2014, Chris is working as a postdoctoral researcher at the department of Anatomy and Neuroscience, Neurology and Psychiatry of the VU University medical center. Part of his job is to set-up and manage the Netherlands Parkinson Cohort, a national collaboration between the Dutch University Medical Centers to investigate the pathophysiology of Parkinson’s disease and the heterogeneity of its clinical manifestations.
