TABLE OF CONTENTS

CHAPTER 1  General introduction

CHAPTER 2  A murine monoclonal antibody to glycogen; characterization of epitope-fine specificity by using saturation transfer difference (STD) NMR spectroscopy and its use in mycobacterial capsular alpha-glucan cell-surface research

CHAPTER 3  Mycobacterium tuberculosis employs an intricate biosynthesis network to synthesize intra and extracellular α-glucans required for virulence

CHAPTER 4  Inorganic phosphate limitation modulates capsular polysaccharide composition in mycobacteria

CHAPTER 5  Structure and function of RNase AS, a polyadenylate-specific exoribonuclease affecting mycobacterial virulence in vivo

CHAPTER 6  General discussion

CHAPTER 7  Nederlandse samenvatting
