

TABLE OF CONTENTS

- CHAPTER 1 **General introduction**
- CHAPTER 2 **A murine monoclonal antibody to glycogen; characterization of epitope-fine specificity by using saturation transfer difference (STD) NMR spectroscopy and its use in mycobacterial capsular alpha-glucan cell-surface research**
- CHAPTER 3 ***Mycobacterium tuberculosis* employs an intricate biosynthesis network to synthesize intra and extracellular α -glucans required for virulence**
- CHAPTER 4 **Inorganic phosphate limitation modulates capsular polysaccharide composition in mycobacteria**
- CHAPTER 5 **Structure and function of RNase AS, a polyadenylate-specific exoribonuclease affecting mycobacterial virulence *in vivo***
- CHAPTER 6 **General discussion**
- CHAPTER 7 **Nederlandse samenvatting**
