

CONTENTS

Chapter 1	General introduction	9
Chapter 2	High and interrelated rates of PD-L1 ⁺ CD14 ⁺ antigen-presenting cells and regulatory T cells mark the microenvironment of metastatic lymph nodes from patients with cervical cancer.	23
Chapter 3	High levels of soluble MICA are significantly related to increased disease-free and disease-specific survival in patients with cervical adenocarcinoma.	47
Chapter 4	HLA-DRA expression is significantly related to an increased disease-free and disease-specific survival in patients with cervical adenocarcinoma.	67
Chapter 5	From prospective biobanking to precision medicine: BIO-RAIDS – an EU study protocol in cervical cancer.	83
Chapter 6	Precision medicine in cancer: challenges and recommendations from an EU-funded cervical cancer biobanking study.	99
Chapter 7	HPV16 E7 DNA tattooing: safety, immunogenicity and clinical response in patients with HPV-positive vulvar intraepithelial neoplasia.	123
Chapter 8	General discussion	151
Chapter 9	Summary	167
	Samenvatting	173
