Table of contents

1.0 Introduction

1.1 General background

1.2 The diagnostic challenge of the late onset frontal lobe syndrome

1.3 Rationale of this thesis

2.0 Clinical similarities and dissimilarities between behavioural variant frontotemporal dementia and primary psychiatric disorders

2.1 Diagnostic accuracy of the FTD consensus criteria in the late onset frontal lobe syndrome

2.2 Cognitive deficits in patients with neuropsychiatric symptoms: a comparative study between behavioral variant frontotemporal dementia and primary psychiatric disorders

2.3 Psychosis in behavioural variant frontotemporal dementia

3.0 Biomarkers in the separation of behavioural variant frontotemporal dementia from primary psychiatric disorders

3.1 Diagnostic accuracy of MRI and additional \(^{18}\text{F}\)FDG-PET for behavioral variant frontotemporal dementia in patients with late onset behavioral changes

3.2 CSF biomarker examination as a tool to discriminate behavioural variant frontotemporal dementia from primary psychiatric disorders

3.3 Grey matter network differences between behavioural variant frontotemporal dementia and Alzheimer’s disease

3.4 Grey matter network disruptions in behavioral variant frontotemporal dementia and major depressive disorder
4.0 Clinical predictors for primary psychiatric disorders versus behavioural variant frontotemporal dementia

4.1 The diagnostic challenge of the late-onset frontal lobe syndrome: clinical predictors for primary psychiatric disorders versus behavioral variant frontotemporal dementia

5.0 Summary and general discussion

6.0 Nederlandse samenvatting
