

Contents

1	Introduction	1
1.1	Order versus entropy	1
1.2	Spatio-temporal organization and intracellular transport	2
1.3	On the nano-scale: use nanometer scale	2
1.4	Outline of this thesis	3
1.5	References	5
2	Trans-membrane protein diffusion in living bacteria	9
2.1	Introduction	10
2.2	The biological relevance of membrane–protein diffusion	11
2.3	Microscopy methods for diffusion characterization	13
2.4	Analysis of pure brownian diffusion	19
2.5	Analysis of anomalous diffusion	21
2.6	Analysis of heterogeneous diffusion	23
2.7	Analysis of diffusion along the curved surface of the bacterial membrane	26
2.8	IPODD - a new method to analyse diffusion on curved surfaces	27
2.9	Conclusions and outlook	30
2.10	Methods	33
2.11	References	34
3	MreB-dependent organization of the <i>E. coli</i> membrane	41
3.1	Introduction	42
3.2	MreB organizes lipid micro-domains	44
3.3	Mirco-domains form via MreB-induced lipid confinement	46
3.4	TMP diffusion is homogeneous yet confined by MreB	51

3.5	TMP diffusion is weakly size-dependent	54
3.6	Discussion	55
3.7	Methods	58
3.8	References	69
4	Functional differentiation of cooperating kinesin-2 motors in IFT	77
4.1	Introduction	78
4.2	IFT-proteins display unexpected differences in their distribution	79
4.3	Regions of import, handover, transport and recycling	80
4.4	Kinesin-II, OSM-3 and IFT-particle turn around	83
4.5	Linking single-motor dynamics to motor distribution	85
4.6	Transition-zone structures act as roadblocks affecting IFT-dynamics	87
4.7	Kinesin-II mediates both loading and transport at the TZ	89
4.8	Discussion	91
4.9	Methods	94
4.10	References	107
5	Interplay between ciliary ultrastructure and IFT-train dynamics	113
5.1	Introduction	115
5.2	Single-molecule imaging of IFT	116
5.3	Identifying ciliary subdomains by single-molecule super-resolution imaging	118
5.4	Ciliary subdomain specific IFT dynamics	120
5.5	IFT-train pausing	125
5.6	IFT-train turnarounds	125
5.7	Structural defect in absence of kinesin-II function and IFT-train alignment	127
5.8	Discussion	129
5.9	Methods	134
5.10	References	139

Samenvatting	145
